

The Floor to Ceiling E-business Solution for Sage Pro

Elevator for Sage Pro is a complete e-business solution for Pro Series users. Elevator consists of three components that together can elevate your business to the web!

Components of Elevator for Sage Pro

Dynamic Catalog allows your customers to check their account status, look up items and place orders directly on your web site. The catalog based shopping cart is dynamically created with your Pro Series data. The Dynamic Catalog will calculate shipping, sales tax, and process credit cards all via your web site.

ELFtp File Transfer Program acts as a 'robot' moving data between your web site and your Pro Series. This can be done with a standard dial up Internet account. No costly permanent Internet connection is needed.

Elevator Function Set configures the Dynamic Catalog, and enhances the Pro Series inventory and customer databases for e-commerce.

Features of Elevator for Sage Pro

Dynamic Catalog Features

- Customized catalog web site allows search by item number, product line, or key words
- Customer login retrieves data from the Pro Series customer databases to validate credit limit, shipping address, sales tax, pricing and product availability
- Customers can inquire account balance and order status on line

ELFtp File Transfer Program Features

- Each event can be scheduled for customized frequency of data updates.
- ELFtp will automatically connect to the Internet when events are triggered.

Elevator Function Set Features

- Adds new fields to Pro Series customer and inventory files via the data dictionary to enhance Pro Series data for e-commerce.
- Elevator maintains new fields and set-up features via 'custom menu programs' or 'hot keys' – Pro Series source code is not modified!
 - Common Pro Series data transfer scripts are provided (with source code) for use with ELFtp

New! Sales Team works with Dynamic Catalog or in place of Dynamic Catalog to provide a browser based order entry and information center for your remote sales force.

- Both on-line and off-line capabilities
- Streamlined interface for quick order entry
- Sales territory reporting

Who needs Elevator?

SagePro users interested in integrating their web site to their accounting system automatically.

E-merchants interested in integrating their successful web site into a backend accounting system

Anyone with a static web site who can't keep it current!
